## **DETAILED ACTION**

### ***Examiner's Statement of Reasons for Allowance***

The following is an examiner's statement of reasons for allowance: The prior art fails to disclose or make obvious the independent claims 1 and 17 which claim a dishwasher with a sump housing with an opening in a side; a heater assembly fastened to an inside of the sump housing; a pump comprising an impeller mounted above the heater assembly wherein the pump further comprises a motor mounted to an outside of the sump housing and a shaft for transmission of driving force from the motor to the impeller; and wherein the heater assembly can be attached or detached to the sump housing by passing through the opening, which is positioned between a bottom of the sump housing and the impeller.

The closest prior art of record is U.S. Patent No. 5,900,070 to Jarvis et al. Jarvis et al. teaches a dishwasher comprising a sump housing; a tub; a wash arm assembly; a heater assembly fastened to an inside of the sump housing; and a pump assembly fastened to the sump housing; and that the water is pumped to the heated wash water over the dishes which are placed above the heater. Jarvis et al. also teaches that the dishwasher has a wash impeller in the sump housing; a motor under the sump housing; and an output shaft passed through a bottom of the sump housing.

The major difference between the prior art and the current invention is that the heater assembly of the prior art is exposed to the washing tub environment wherein a stray utensil or ware may strike said heating assembly and damage the heating element

wherein the current invention has a contained heating assembly that protects said assembly from damage due to external objects. Furthermore the prior art differs from the current invention in that the heating assembly of the prior art is exposed to the interior of the washing tub wherein a great amount of cooling occurs before said heated water is sprayed onto the ware to be cleaned and the washing water may not be as efficiently heated as with the contained heating assembly of the current invention that directly heats the washing water then sprays said heated water onto the ware to be cleaned.
